Assignment-06

Roll No: 123M1H010
Name of Student: Harshal Bhamare **Submission Date:30** / 10/ 2024

1. Create an Android application that demonstrates file management in internal storage. Implement functionality to save a text file containing user input to internal storage when a button is clicked. Provide options to read from and delete the saved file. Ensure that the file operations handle cases where the file does not exist and display appropriate messages to the user

Solution:

XML FILE:

```
    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="write"
        android:id="@+id/write"/>

    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="delete"
        android:id="@+id/delete"/>

    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="read"
        android:id="@+id/read"/>

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:id="@+id/fdata"/>
</LinearLayout>
        android:hint="enter data:"/>
```

JAVA FILE:

```

2. Develop an app that allows users to save and retrieve files from external storage (e.g., SD card). Implement functionality to create a directory in external storage, save a text file with user input, and list all files in the directory. Ensure that the app properly requests and handles external storage permissions and provides feedback if the permissions are not granted.

       android:layout_marginTop="16dp" />
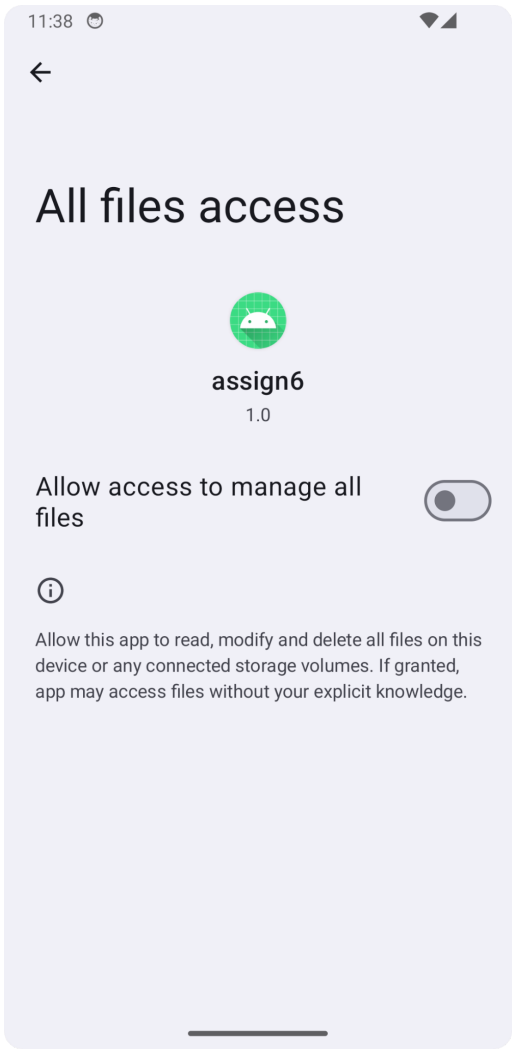
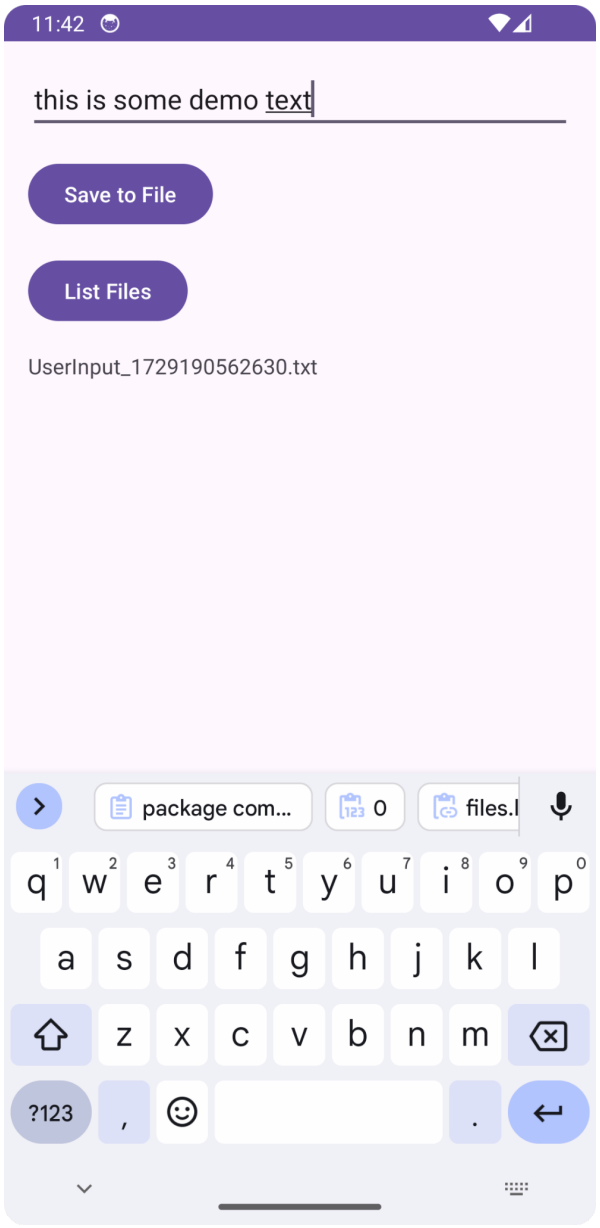
</RelativeLayout>
```

Output:



11:38
All files access
assign6
1.0
Allow access to manage all files
Allow this app to read, modify and delete all files on this device or any connected storage volumes. If granted, app may access files without your explicit knowledge.



3. Build a simple notes application that uses SQLite to store and retrieve notes. Implement a database schema to store notes with fields for title and content. Create an activity that allows users to add, view, edit, and delete notes. Use SQLiteOpenHelper to manage database creation and version management, and provide a user-friendly interface for interacting with the notes.

Solution:

```
package com.example.assign6;
```

XML FILE:

```

4. Design an application that uses Shared Preferences to save and retrieve user settings. Implement a settings screen where users can toggle options such as dark mode or notification preferences. Store these settings using Shared Preferences and apply them throughout the app. Provide functionality to reset preferences to default values and ensure that changes are reflected immediately in the app.

Solution:

XML FILE:

```
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical">

    android:id="@+id/main"
```

```
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Dark Mode:"/>

    <ToggleButton
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:textOn="ON"
        android:textOff="OFF"
        android:id="@+id/dark"/>

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Notifications"/>

    <ToggleButton
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:textOn="ON"
        android:textOff="OFF"
        android:id="@+id/notific"/>

</LinearLayout>
```

JAVA FILE:

```

6. Develop an app that allows users to capture and save media files (e.g., images, videos) to external storage. Implement functionality to capture a photo or video using the device's camera, save it to a specified directory on external storage, and provide options to share the media files using intents. Ensure that the app handles external storage permissions and provides feedback on successful or failed operations.

8. Create an app that uses Shared Preferences to manage app-specific preferences such as theme selection (light/dark mode), font size, and language. Implement a settings screen to allow users to adjust these preferences and save their choices. Ensure that the app reflects the selected preferences throughout the app and persists them across app restarts.

Solution:

JAVA FILE:

```
package com.example.assign;

import android.content.SharedPreferences;
import android.os.Bundle;

import androidx.appcompat.app.*;
```

```
import androidx.core.view.*;

import android.view.View;
import android.widget.*;

public class MainActivity extends AppCompatActivity {

   ToggleButton dark;
   SharedPreferences sp;
   Button submit;
   EditText fs, lang;
   @Override
   protected void onCreate(Bundle savedInstanceState) {
       super.onCreate(savedInstanceState);
       setContentView(R.layout.activity_main);

       sp = getSharedPreferences("prefs", MODE_PRIVATE);
       SharedPreferences.Editor e = sp.edit();
       dark = findViewById(R.id.dark);
       fs = findViewById(R.id.fs);
       lang =
       findViewById(R.id.lang);
       submit = findViewById(R.id.submit);

       if(sp.getInt("dark", 0)==1){
           dark.setChecked(true);
       }
       fs.setText(sp.getString("fontsize", ""));
       lang.setText(sp.getString("lang", ""));

       dark.setOnCheckedChangeListener(new
CompoundButton.OnCheckedChangeListener() {
           @Override
           public void onCheckedChanged(CompoundButton buttonView, boolean
isChecked) {
               if(isChecked){
                   e.putInt("dark", 1);
                   e.apply();
               }
               else{
                   e.putInt("dark", 0);
                   e.apply();
               }

           }
```

```
        });

        submit.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                String fsize = fs.getText().toString();
                String l = lang.getText().toString();
                e.putInt("dark", 1);
                e.putString("fontsize", fsize);
                e.putString("lang", l);
                e.apply();
            }
        });
    }
}
```

XML FILE:

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/main"
    android:layout_width="match_parent"
